DISCLAIMER

This Undergraduate Handbook has been compiled to improve the communication between staff and students regarding programmes, that is, the majors, minors and options offered within the Faculty. The programme requirements outlined are to be adhered to by 1) Students enrolling in the Faculty for the 2019-2020 academic year; 2) Students who transferred into the Faculty for the 2019-2020 academic year; and 3) Students who changed their major/minor for the 2019-2020 academic year.

Though the Faculty worked assiduously to present the most updated information in the Handbook, students should communicate with their Departments/Sections for changes that possibly occurred after the publication of the Handbook.

Pre-Trained Teacher: An important feature of this programme is the field work component carried out in local secondary schools that enables pre-trained teachers to get initial teaching experience by first working in pairs in their second year, and then individually by full immersion in their final year for 6 and 10 weeks respectively. For the field work components they are required to plan and deliver aspects of secondary schools’ science curricula under the supervision of their UWI supervisors and the cooperating teachers in the schools assigned. Efforts are made to expose them to teaching at both lower and upper secondary levels in more than one type of secondary institution in the two years. During their final year students complete a lesson study where they plan, implement and evaluate a specific lesson they have taught while on field work.

Trained Teachers: Trained teachers take the same courses pursued by the pre-trained teachers in their second and third years but the focus is on professional development. As such, a strong emphasis is placed on reflective practice and on identifying areas of their teaching that need to be strengthened. The trained teachers get an opportunity to revisit teaching through their field work experience. Here they are required to use action research as a means of planning, implementing and evaluating specific interventions used to teach topics from the CSEC curriculum over a 6 weeks period in secondary schools.

N.B.

Candidates who have completed the New Double Option Science diploma programmes from The MICO University College or Church Teachers College (with a GPA $\geq 2.5$) may be exempt from Level 1 Chemistry courses.

**COMP3911 INTERNSHIP IN COMPUTING I**
(3 Credits) (Level 3) (Semester 1, 2 and summer)

**Pre-requisite:**
Permission of the Head of Department.

**Course Content:**
The exact nature of the internship depends upon the interests of the student and the specific needs of the cooperating organisation. It is assumed and expected that the intern will be involved in some area of computing and thereby gain valuable experience in his/her selected field of study.

Internships contribute to the education of the whole person by emphasizing the importance of work and by providing opportunities for self-reflection. The internship should be chosen to build on the student's own interests and to relate what he/she has learned in school to its application in the workplace. In addition, the internship should help the student evaluate him/herself as a worker and as a potential employee in a particular professional field. Through the internship, the student will enhance his/her feelings of self-worth and confidence in performing in the workplace. While on the job, the student should not only apply lessons learned in school to his/her particular job tasks, but he/she should also explore vocational possibilities and seek to discover what kinds of work he/she enjoys. In addition, the student will be able to build on his/her résumé and professional portfolio. Internship experiences should also offer the student access to potential mentors in his/her professional field.

**Responsibility of the Student:**
The student is required to spend about 150 working hours (e.g. 12 hours per week for approximately 13 weeks during semester 1 or 2, or 40 hours per week for approximately 4 weeks) working on a project or projects of the participating organisation’s choice. Where the students are registered for the course in semester 1 or 2, the hours allotted for the internship exercise should be selected by the student, at times when no classes are scheduled.

**The student must:**
- meet regularly with the Departmental Internship Coordinator (IC) and periodically with fellow interns to discuss his/her internship experiences
• maintain a journal indicating dates and hours worked, and a brief description of the work performed
• submit a final report summarising and evaluating the internship experience; and
• complete a résumé and interview at the Office of Placement and Career Services, UWI (Mona)

Any problems encountered during the internship should be discussed immediately with the IC so that appropriate action can be taken.

Responsibility of the participating Organisation:
Participating organisations will be vetted by the Internship Coordinator to ensure that they are suitable.

The organisation will:
• provide a mentor and appropriate work environment
• expose the student to the type of work which he/she would encounter in an entry level professional position
• provide appropriate personnel to oversee the project(s) assigned to the student, and the resources needed to accomplish the work
• treat the student as it would any employee, and
• expect the same degree of responsibility from the student, even as the student is not an employee of the firm

The mentor will be asked to:
• provide a written evaluation of the student’s performance to the IC at the end of the internship;
• provide the student with a periodic evaluation of his/her performance; and
• consult with the IC when and if necessary.

Although an internship is a learning experience, it is expected that the student will normally earn some compensation for work performed that may contribute to income generating activities, either in the form of a wage, stipend, or reimbursement of expenses.

Responsibility of the Internship Coordinator (IC):
The IC will:
• organise preparation seminars for students at the start of each semester, featuring presentations from the Office of Placement and Career Services, industry personnel and alumni
• arrange preliminary meetings with mentors where students are briefed on expectations and responsibilities specific to the organisation;
• meet/correspond with students: student group meetings (weekly) via online journal, videoconference, etc. for students to share experiences;
• review reports from the organisation;
• review reports from the student;
• serve as a liaison between the Department of Computing (DoC) and the participating organisation;
• oversee the progress of the intern;
• make suggestions to both the student and the organisation on ways to enhance the benefits of the internship;
• meet regularly with the intern to discuss his/her experiences;
• help resolve any problems the organisation and the student might have; and
• review all the reports submitted by the participating organisation and the student.

**Evaluation:**

There will be two components of the course’s assessment: the internship mentor’s evaluation and the student’s work during the internship and his/her final submission at the conclusion of the internship. Students must pass both aspects of the course.

The internship mentor will provide a written evaluation of the student’s performance. This assessment will be done using a 5-point Likert scale. An assessment/evaluation form will be provided for this purpose, and the form will be returned to the DoC in a sealed envelope. The internship coordinator will assign a grade not exceeding 25% of the possible marks based on this assessment, and on the student’s journal which would detail the tasks assigned to the student and their level of completion.

**The student will be evaluated on:**

• Quality of work;
• Use of time (efficient/effective use of time to complete tasks);
• Ability to take initiative (ability to work independently);
• Grasp of subject (understanding of applicable standards and procedures);
• Judgement skills (ability to make appropriate work-related decisions);
• Interpersonal relations/teamwork (effectiveness in working with peers
and supervisors);
- Adaptability (ability to alter activities to accommodate change);
- Problem solving/critical thinking skills;
- Punctuality, attendance;
- Verbal and written communication skills;
- Whether the goals of the internship were met (qualitative response);
- What skills the student developed (qualitative response);
- The observed primary strengths of the intern (qualitative response);
- Recommendations for improvement (qualitative response);
- What is your overall assessment of the student’s performance? (qualitative response); and
- Other relevant observations.

75% will be based on the following:
- Regular communication with the DIC (weekly reports) - 15%
- Attendance at and participation in required internship meetings (weekly) - 10%;
- Oral presentation summarizing the activities completed during the internship - 20%
- Documentation of the internship experience in an internship portfolio (30%) which includes:
  - A final report summarizing the internship, relating it to courses done, and reflecting on the experience. The final report will have an appendix containing the student’s journal entries from the internship (guidelines will be provided).
  - An updated résumé that incorporates the internship experience.
  - A "company evaluation form” rating the participating organisation.
  - Proof of consultation/debriefing with the Office of Placement and Career Services, UWI (Mona).

- organise preparation seminars for students at the start of each semester, featuring presentations from the Office of Placement and Career Services, industry personnel and alumni;
- arrange preliminary meetings with mentors where students are briefed on expectations and responsibilities specific to the organisation;
- meet/correspond with students: student group meetings (weekly) via online journal, videoconference, etc. for students to share experiences;
- review reports from the organisation;
- review reports from the student;
- serve as a liaison between the Department of Computing (DoC) and the participating organisation;
- oversee the progress of the intern;
- make suggestions to both the student and the organisation on ways to enhance the benefits of the internship;
- meet regularly with the intern to discuss his/her experiences;
• help resolve any problems the organisation and the student might have; and
• review all the reports submitted by the participating organisation and the student.

**Evaluation:**
There will be two components of the course’s assessment: the internship mentor’s evaluation and the student’s work during the internship and his/her final submission at the conclusion of the internship. Students must pass both aspects of the course.

The internship mentor will provide a written evaluation of the student's performance. This assessment will be done using a 5-point Likert scale. An assessment/evaluation form will be provided for this purpose, and the form will be returned to the DoC in a sealed envelope. The internship coordinator will assign a grade not exceeding 25% of the possible marks based on this assessment, and on the student’s journal which would detail the tasks assigned to the student and their level of completion.

**The student will be evaluated on:**
- Quality of work;
- Use of time (efficient/effective use of time to complete tasks);
- Ability to take initiative (ability to work independently);
- Grasp of subject (understanding of applicable standards and procedures);
- Judgement skills (ability to make appropriate work-related decisions);
- Interpersonal relations/teamwork (effectiveness in working with peers and supervisors);
- Adaptability (ability to alter activities to accommodate change);
- Problem solving/critical thinking skills;
- Punctuality, attendance;
- Verbal and written communication skills;
- Whether the goals of the internship were met (qualitative response);
- What skills the student developed (qualitative response);
- The observed primary strengths of the intern (qualitative response);
- Recommendations for improvement (qualitative response);
- What is your overall assessment of the student’s performance? (qualitative response); and
- Other relevant observations.
75% will be based on the following:

- regular communication with the DIC (weekly reports) - 15%
- attendance at and participation in required internship meetings (weekly) - 10%;
- oral presentation summarizing the activities completed during the internship - 20%;
- documentation of the internship experience in an Internship Portfolio (30%) which includes:
  - A final report summarizing the internship, relating it to courses done, and reflecting on the experience. The final report will have an appendix containing the student’s journal entries from the internship (guidelines will be provided).
  - An updated résumé that incorporates the internship experience.
  - A "company evaluation form" rating the participating organisation.
  - Proof of consultation/debriefing with the Office of Placement and Career Services, UWI (Mona).

The proposal involves the formulation of a research question, a statement of research design and methodology and includes details of any sampling methods, laboratory techniques and methods of analysis to be used. The proposal is assessed and the proposal must satisfy the assessors before the student can proceed to the next stage. At the second stage, the student is assigned to a supervisor who assists with the fine-tuning of the research design and methodology, before students proceeds to the field data collection stage. A third stage involves the submission of progress report to the supervisor, and the report includes an indication of a work plan to complete the data analysis and write up. The final stages of the course are the formal graded assessment of the project, and involve a multi-media presentation of the research results, and the submission of a dissertation.

* can be done prior to the course

Students pursuing a major in the Physics Department are required to complete **MATH1185 - Calculus for Scientists & Engineers and MATH1141 - Intro to Linear Algebra and Analytic Geometry** before their final year.

To qualify for Level 2 Physics, students must have: PHYS1411 - Mechanics; PHYS1412 - Waves, Optics & Thermodynamics; PHYS1421 - Electricity & Magnetism; PHYS1422 - Modern Physics; ELET1400 (except Material Science major); Electronics major needs ELET1405. A double major in the Physics Department must have Electronics as one of the majors.
At least 99 credits are required for this programme. The courses are outlined below.

*Persons pursuing PHYS1411, PHYS1412, PHYS1421 and PHYS1422 could use these to replace ELNG 1101 as the content of the latter is covered in parts of each of the four courses.*

*At least two of the three electives must be level.*
PHYSICS WITH EDUCATION (B.Sc.)

LEVEL 1
Twenty-four (24) credits from two subject areas in the Faculty of Science and technology, divided equally between the two so as to provide the Pre-requisites for Level 2 courses (Note that MATH1141 & MATH1185 must be completed prior to pursuing Level 3 Physics Department courses). One of the subject areas must be Physics (required courses are PHYS1411, PHYS1412, PHYS1421, PHYS1422 and ELET1400). Foundations of Education courses (see A below) may also be taken with Level 1 courses from the Faculty of Science and Technology.

Trained Teachers with the New Double Option (since 2004) with Physics as one of their majors and who have a GPA of at least 2.9 may be granted exemption from Level 1 requirements.

Trained Teachers with Single Option science are required to do Preliminary Physics.

LEVEL 2
Thirty-six (36) credits are required from Levels 2 and 3 Physics courses such that constitute the General Physics major.

# REQUIREMENTS FOR A MAJOR IN THE PHYSICS DEPARTMENT

The table below outlines the courses required for a major in the Department of Physics. Please note that in some cases additional credits must be obtained from other Physics Department courses to satisfy the thirty-six (36) credits needed for the major. Other department and/or Faculty and/or out of Faculty courses (including Foundation courses) must be done to satisfy the ninety-three (93) credits necessary for award of your degree.

A double major within the department is possible only if the Electronics major is a part of the double major. E.g. A major in Electronics and a major in General Physics. Also, a major and a minor within the department is possible only if Electronics satisfies the major or the minor. E.g. A major in Medical Physics with a minor in Electronics. Alternatively, double majors may be done with any Physics Department major and a major from another Department e.g. A major in Material Science with a major in Chemistry.

• Courses in bold are required for a minor.
• A major in Physics/Electronics requires 36 credits of advanced level (level 2 and level 3) courses.
• A minor in Physics/Electronics requires 18 credits of advanced level (level 2 and level 3) courses.
• Additional Physics/Electronics courses may be needed to complete a major.
• If pursuing a double major, a single advanced level course CANNOT count towards 2 majors. Therefore, due to overlapping core courses, a double major within the department MUST have Electronics as one of the majors. Note well, ELET2420 is a core course for some non-Electronics major, so it cannot be counted towards the Electronics majors as a free elective.
• The Mathematics courses listed are those required to complete Physics majors. For more information on Mathematics courses, please contact the Department on Mathematics. Students pursuing both MATH1142 and MATH1151 otherwise do not need to do MATH1185.

Notes:
• Other credits are required to complete majors. See previous page. Electives can be selected in any semester of Level 2 and Level 3 as offered.
• MATH1141 and MATH1185 are compulsory and recommended for completion in Level 1, but may be done in Level 2.
• Preliminary Chemistry courses or their equivalent are needed for Materials Science Major.

BURSARIES
DEPARTMENT OF CHEMISTRY

- **The Cedric Hassall Scholarship**
  The Cedric Hassall Prize is the premier award in the Department of Chemistry. It was first awarded as a prize in 1971 and was given to the Chemistry student who had shown the best overall performance in the examinations associated with the first year of advanced Chemistry courses. This prize has been upgraded to a Scholarship and is awarded to a final year student majoring in Chemistry who satisfies the above criteria. The scholarship is named in honour of Professor Cedric Hassall (1919-2017), the first Professor of Chemistry at the University and former Head of the Department of Chemistry (1948-1957), who delivered the inaugural lecture to the original batch of medical students. It is intended to foster and encourage students to achieve standards of excellence which Professor Hassall insisted should be the hallmark of students pursuing courses in Chemistry. The prize was established largely through the initiative of Professor Gerald Lalor during his tenure as Head of the Department.

- **The Wilfred Chan Award**
  Wilfred Chan completed the requirements for the BSc degree in 1952 and went on to pursue research under the direction of Prof. Cedric Hassall. He completed his research in 1956 and was the first West Indian to receive the PhD degree at Mona. In 1959 he was appointed Lecturer and began a vigorous research programme and rose through the ranks to become the first West Indian to be promoted to a personal chair (1971). In 1966 the Chemistry Department hosted the first Mona Symposium (on Natural Products Chemistry) with him as its Organizing Secretary. Prof. Chan later served as Head of the Chemistry Department at Mona from 1972 to 1975. In 1979 he moved to the St. Augustine Campus to boost research efforts in its young Chemistry Department. He retired from St. Augustine in 1997, having served as Head and Dean during his tenure there. Prof. Chan’s contributions over the years to natural products chemistry are internationally recognized.

  The Wilfred Chan Award was first made in 2000 and is for a student who has the best academic performance in the advanced Organic Chemistry core courses and who is pursuing a major in Chemistry. The awardee should not simultaneously hold any other Chemistry Department prize.
