UWI INAUGURAL LECTURE

The New Chemistry Lecture Theatre (C5)
Thursday, September 25, 2008 at 6:00 p.m.

The Public is invited to attend the Inaugural Lecture entitled:

“The development of smart molecular systems for sensing, catalytic and therapeutic applications”

ABSTRACT

Chemistry is essential to life. Scientists work tirelessly to find solutions to challenges faced from day to day. Philosophers, poets, and scientists have used chemistry to depict the nature of reality. Methodologies employed for the development of my research program in molecular sensors and catalysis at the UWI-Mona Campus will be highlighted in this seminar. Although my work was internationally recognized and I have published over forty publications many obstacles remain regarding smart molecular systems. How to conquer these obstacles and move forward is the topic of this seminar.
